Company announcement no. 7

Adequate own funds and the internal capital adequacy requirement

Pursuant to the executive order on calculation of risk exposure amount, total capital and solvency need, Danish Ship Finance must publish its adequate own funds on a quarterly basis.

The calculation is made on the basis of the 8+ approach and the Danish FSA's "Guidelines on Adequate Capital Base and Solvency Needs for Credit Institutions".

The guidelines issued by the Danish FSA contain benchmarks for stress tests etc. These benchmarks define the limits within which the Danish FSA assesses the institution's risks as being covered by 8 percent of the total risk exposure amount. If these limits are exceeded, the institution is required to increase its adequate own funds.

The solvency calculation is presented for the Group and the subsidiary (referred to as solo).

Adequate own funds at 31 March 2024

DKKm / %	Group	Solo
Total weighted risk exposure amount	43,611	43,538
Pillar I requirement (8 % of total risk exposure amount)	3,489	3,483
Earnings	-	-
